Performance Plus measures performance against target within tolerances. At present the majority of BVPIs have the default +/- 10% tolerance. Some tolerances will need to be changed for individual indicators. The system then generates an "alert icon" to show how we are doing.
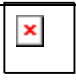

Performance Plus Alert Icons

  - Better than Target Performance

  - Worse than Target Performance

  - On Target Performance – Within Tolerance

Other icons within Performance Plus reports

	Improving Performance against target
	Worsening Performance against target
	Static Performance

  - Missing Data

  - Missing Data and missing target
